

ADA Operators

Access door operators for ADA

DOR-O-MATIC®

ADA Operators

Senior Swing™

The Senior Swing access door operator meets ADA requirements for providing equal access for the disabled at exterior and interior entryways. Dor-O-Matic's versatile, heavy-duty, two-in-one door operator provides incomparably smooth, care-free electromechanical operation. The access door operator opens the door automatically for the disabled, yet can be used in manual mode for other traffic. This unit provides outstanding operating benefits and the ultimate in customer satisfaction, even in high-use applications.

Standard Features

- Fully compliant with ANSI A156.19.
- Meets UL requirements.
- All electromechanical unit.
- Microprocessor control.
- Available for use with push button or push plate switches.
- Remote control battery-operated switch systems available.
- Automatic opening and closing force less than 15 lbs.
- Auto Reverse on opening and closing cycle – provides safety by reversing direction when coming into contact with an object.
- Power boost closing – ensures latching in even the most severe wind conditions.
- Adjustable Time Delay – maximum field condition flexibility.
- Adjustable Opening Speed – various opening speeds within specified ANSI guidelines and ADA codes.
- No guide rails or safety carpets required.
- Low-voltage switches are available with international wheelchair logo.
- Ideal for new buildings or retrofitting.
- Holds door closed under spring pressure roughly equivalent to a #3 manual closer for an exterior door.
- Concealed overhead or surface-applied.
- Internally tested to 10,000,000 cycles.

Middle Swing™

Dor-O-Matic's Middle Swing access door operator has the same built-in reliability as Senior Swing, with its electromechanical drive and simplified microprocessor controls. Automatic and manual modes are available. Middle Swing features a safety stop that will stop and slowly return to the closed position if an object is encountered during the opening or closing cycle. This access door operator is a particularly cost-effective way of meeting ADA requirements, and is an impressive, care-free performer in a wide variety of installations.

Standard Features

- Fully compliant with ANSI A156.19.
- Meets UL requirements.
- All electromechanical unit.
- Microprocessor control.
- Available for use with push button switches.
- Remote control battery-operated switch systems available.
- Manual opening force of 8-1/2 lbs.
- Low-voltage switches are available with international wheelchair logo.
- Ideal for new buildings or retrofitting.
- Concealed overhead or surface-applied.

Benchmark Swing

Why worry about multiple manufacturers and model numbers when deciding which low-energy operator you'll need to automate a door for ADA compliance? Benchmark Swing by Dor-O-Matic® can suit virtually any application—interior or exterior. Nonhanded, push- or pull-side mounted, Benchmark greatly simplifies your selection process by doing it all with one compact unit.

Easily adaptable with all Dor-O-Matic activation and accessories, Benchmark offers a microprocessor control box for reliability, a hardened gear system for durability and a unique product concept that combines state-of-the-art technology with affordability.
