

For security's sake, specify Power Boost™

Senior Swing is just one of Dor-O-Matic's operators engineered with Power Boost smart latching.

The Power Boost™ feature is a Dor-O-Matic innovation that assures secure latching regardless of drafts, gusts of winds and pressure differentials that prevent complete closure. No worry about accidental reopening, damage or security with Power Boost!

The "smart" Power Boost switch resides in the operator. During the last few degrees of closing, it automatically exerts an extra force that secures the door. In making it smart, we also made it a simple on/off toggle design, with "reach-up" accessibility under the operator.

Power Boost is available in the low energy ADA operators such as Senior Swing™, as a Benchmark option, and in full power Astro Swing™ operators.
